Praveen Hari

Ottawa, Ontario **Phone:** 343-558-1903 | **Email:** Praveen22h@gmail.com
LinkedIn: linkedin.com/in/praveenhari17 | **GitHub:** PraveenHari17

Skills

- Python, C, Java, HTML, CSS, JavaScript, Node.js, Socket.io, Leaflet.js, Globe.gl, Chart.js
- Technical Reports, Code Documentation, Debugging, testing
- GIT, MySQL, Raspberry Pi, Visual Studio, Linux, FPGA
- DevOps, Object-Oriented Programming (OOP), UI, Responsive Web Applications, Full Stack Dev

Education

Bachelor of Engineering in Computer Systems (3rd year) *September 2021 - April 2026*

Carleton University, Ottawa, ON

- Active member of SCESOC, CUSA, and GDSC
- **Awards:** Award of Excellence for International Students, McDonald Scholarship
- **Certifications:** JavaScript Algorithm and Data Structures & Responsive Web Design

Experience

DizzitUp (Data Analyst/Full Stack Dev Intern) *September 2024 – December2024*

- **Designed and implemented** a real-time dashboard using modern web technologies, resulting in a **30% reduction in manual data processing time**.
- Applied data visualization techniques to effectively present live transaction data, **enhancing user engagement metrics by 15%** through intuitive features.
- Created a comprehensive map interface using **Leaflet.js** and **Globe.gl**, enabling users to track payment flows globally in both 2D and 3D views, which led to a **significant boost in user satisfaction**.
- Integrated **Socket.io** for seamless real-time updates, ensuring **100% uptime** in displaying the latest transaction data.
- Developed filters and heatmaps to enhance transaction intensity visibility across different regions using **Turf.js**, which **reduced transaction analysis time by 20%**.
- Introduced a customizable dark mode feature, enhancing the user experience and resulting in **a 10% increase in user retention**.
- **Technologies Used:** JavaScript, Node.js, Socket.io, Leaflet.js, Globe.gl, Chart.js

Projects

Web-based Dashboard for Real-Time Patient Data (IoT) *January 2024 – May 2024*

- **Collaborated** to create an accessible and responsive user web dashboard using **MVC (Model-View-Controller)** architecture, which helped **reduce patient monitoring time by 30%**.
- Connected **Raspberry Pi** to a web dashboard using IoT principles, resulting in **improved data integration efficiency by 25%**.
- Implemented secure **authentication mechanisms**, ensuring **100% compliance** with healthcare data security standards and protecting the data of **50+ patients**.
- Integrated medical sensors to track key health metrics, such as **blood pressure, heart rate, and SpO2**, offering real-time insights that **increased monitoring efficiency by 20%**.
- Leveraged **Firebase** for cloud storage of patient data, ensuring reliability and reducing **data retrieval time by 40%**.
- Set up real-time alerts to notify healthcare providers of anomalies, improving response time and **increasing patient safety by 15%**
